

HEALTHY SMILES START HERE.

Holistic dentistry, also known as biological dentistry, takes into account a person's entire state of physical and mental health. Holistic dentists still provide standard care, like cleanings and fillings, but they focus on minimally invasive treatment, preventative care, and root causes of diseases of the oral cavity. Our experienced team can help you achieve your goal of wellness through our safer, more conservative approach.

Safe Mercury Filling Removal | Metal-Free Restorations | Ozone Therapy | Amalgam Containment

Welcome to Cosic Dental.

Our forward-thinking doctors always look to treat dental disease in the most natural way possible. Dedicated to providing excellence, our thoughtful doctors offer the best possible whole-body care.

Cosic Dental

Dr. Vanja Cosic

Cosic Dental was established in 2021, when Drs. Vanja and Dunja Cosic Carlson purchased the practice from Drs. Roger and Pamela Schmidt, who wished to retire.

Determined to carry on the holistic dentistry services the Drs. Schmidt maintained for 40 years, Cosic Dental has added a number of new procedures and updated technologies in an effort to provide the most thorough care for their patients.

Cosic Dental's philosophy is that oral health is intrinsically tied to whole body health. In addition to conventional dentistry services, Cosic Dental offers a health centered approach that considers the patient's whole body and promotes overall well-being. Holistic dentistry is just like standard dentistry, but with a focus on minimally invasive treatment and preventative care. Extra measures are taken during every procedure both to ensure safety and to determine the root cause of patients' dental conditions. The materials and tools that are used in each procedure are the highest quality and most bio-compatible on the market to further protect patient welfare. Cosic Dental also utilizes ozone therapy, a treatment that employs the use of ozone to treat infections without the use of drugs or harsh chemicals. The practice uses ozonated water in its waterlines and handpieces. Ozone gas is used in every restorative, surgical and hygiene procedure, thus ensuring a clean and disinfected environment, reducing the chance for infection and initiating the healing process.

Cosic Dental is more than just a dental office. It is a partner in good health. The practice offers health coaching as one of its many services. A nutritionist is on staff to assist patients in adopting healthier habits that will lead to better dental and overall health.

Dr. Dunja Cosic

Along with helping patients be healthier, Cosic Dental prides itself on the superior quality of dental work. Services offered by Cosic Dental include general services, like cleanings, fillings and crowns/bridges. Children of all ages are welcome, with staff working closely with the child and their parents to ensure they have a positive experience. They also evaluate children for orthodontics with a focus on the airway and nasal breathing, which has recently been found to be critical for children's growth and development.

Alongside general services, Cosic Dental also offers a spectrum of specialty and cosmetic procedures, including veneers, all-porcelain crowns, whitening and Invisalign, a teeth-straightening system that is a comfortable and convenient alternative to conventional braces. As a full-service practice, Cosic Dental provides extractions, bone grafting, implants and dentures. It is truly a one-stop destination for all aspects of oral care, with patient wellness and quality dental care as top priorities. ■
